DETAILED ACTION

1. Applicants' amendment dated 09/06/2007 has been received and entered. By the amendment, claims 1, 3-5 and 13-21 are now pending in the application.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 3-5 and 13-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicants' admitted prior art (APA), figures 1-2, in view of Sato, US 2006/0097380 A1.

Regarding the above claims, APA discloses a liquid crystal module (100) comprising a glass substrate (104) having a display area (120) and a peripheral area (130), a gate driver chip (108), a source driver chip (106); wherein the gate/source driver chip(s) are directly mounted on the glass substrate (see figure 2) with an anisotropic conductive film (110).

APA, however, do not explicitly disclose the thickness of the gate/source driver chip is less than 0.3mm. Sato does disclose a gate/source driver chip (IC chip 9) having a thickness of 0.140mm (paragraph [0067], line 12). Therefore, it would have been obvious to one skilled in the art at the time of the invention was made to employ a gate/source driver chip having a thickness less than 0.3mm as shown by Sato in order to make a portable display since the IC chip thickness can be reduced as thin as less than 0.3mm.

Response to Arguments

4. Applicant's arguments filed 09/06/2007 have been fully considered but they are not persuasive.

Applicants' argument is that Sato fails to disclose the driver chip being directly mounted on a glass substrate as stated in claims 1 and 13 of the present invention. The Examiner agrees that Sato might not disclose that the driver chip is not directly mounted on the glass substrate; however, the APA, figure 2, clearly show the driver chip (108) being directly mounted on the substrate (104). In other words, the combination of the APA and Sato would result the same liquid crystal module in which the driver chip would be directly mounted on the substrate as well.

Applicants also contend that the Sato reference is not qualified cited reference because of the effective filing date of the US 2006/0097380. It should be noted that the Sato reference (11/299,812) is a continuation of the application 10/814,290 filed on 04/01/2004; therefore, the effective filing date of the Sato 11/299,812 would be prior to the instant application (12/13/2005).

Accordingly, the rejection of the above claims stand.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
